

# Important Cedar Components

cedar

The components of Cedar that you are likely to use most frequently include:  
Viewers (the Cedar window manager),  
Tioga (the Cedar editor),  
the UserExec,  
Cypress (the database system).

For each of these components, we give the DF file containing all of the sources and references to other whiteboards with further information on the interfaces the components provide.

Additionally, there are a large number of other components of Cedar that you may find useful. The place to look for them is in the Cedar,catalog and the Cedar and ISL release messages (the most recent of which is given below)

*Cedar Catalog*

*Cedar Release Message (4.1)*

*ISL Release (4.1)*

## WHITEBOARD INSTRUCTIONS:

- LEFT => move entity
- ctrl LEFT => delete entity
- MIDDLE => open icon
- shift MIDDLE => expand icon
- RIGHT => grow text box
