

Cedar 4.2 Documentation (Preliminary)

Last edited by: Jim Donahue June 1, 1983 11:06 am, Jim Horning May 23, 1983 1:43 pm

This database gives a very preliminary version of online documentation for Cedar. It consists of several Whiteboards, each of which contains references to other Whiteboards and to various files that contain important information about the system. Or, to browse around in it, just MIDDLE click the icon for the manual and its various pieces (do the same to any of the icons on any Whiteboard to see its contents). Also, check out the *Briefing Blurb* below for the scoop on PARC and Cedar (complements of Lyle Ramshaw)

To find out more about the structure of Cedar, browse the Whiteboards given below—they provide information about the basic operation of Cedar, the Cedar Language, the major components of the Cedar system (things you'll end up using all the time), the most widely used Cedar tools (like the mail system, the file tool, etc.) and the important programming interfaces of Cedar. Also, read the *Introduction* referenced below—it gives important general information about Cedar.

The Briefing Blurb

The truth about PARC and Cedar (from Lyle Ramshaw) -- everything you want to know about the local environment (including some hints for gracious living)
