SSTKP

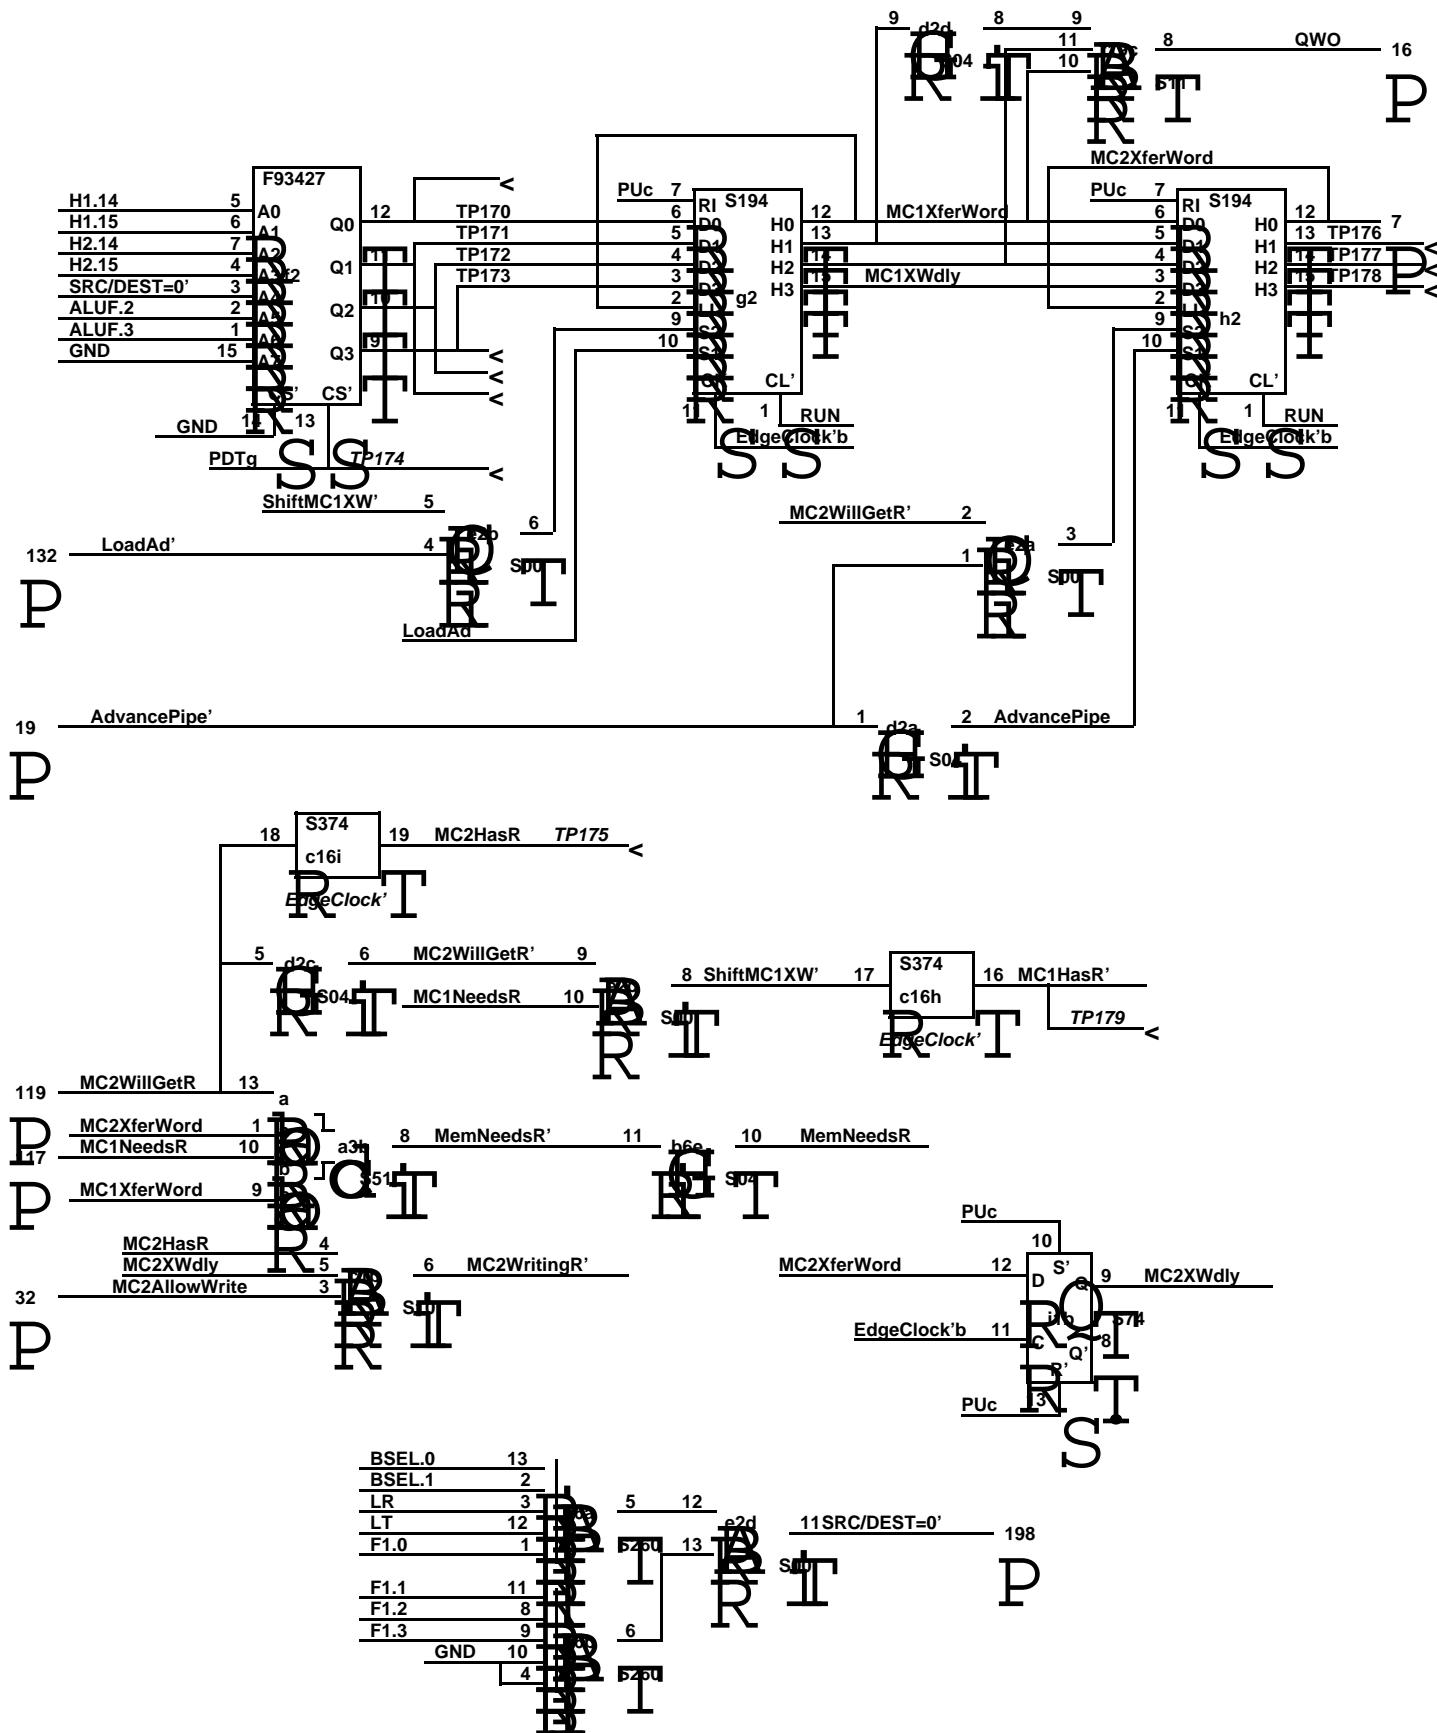

STKP

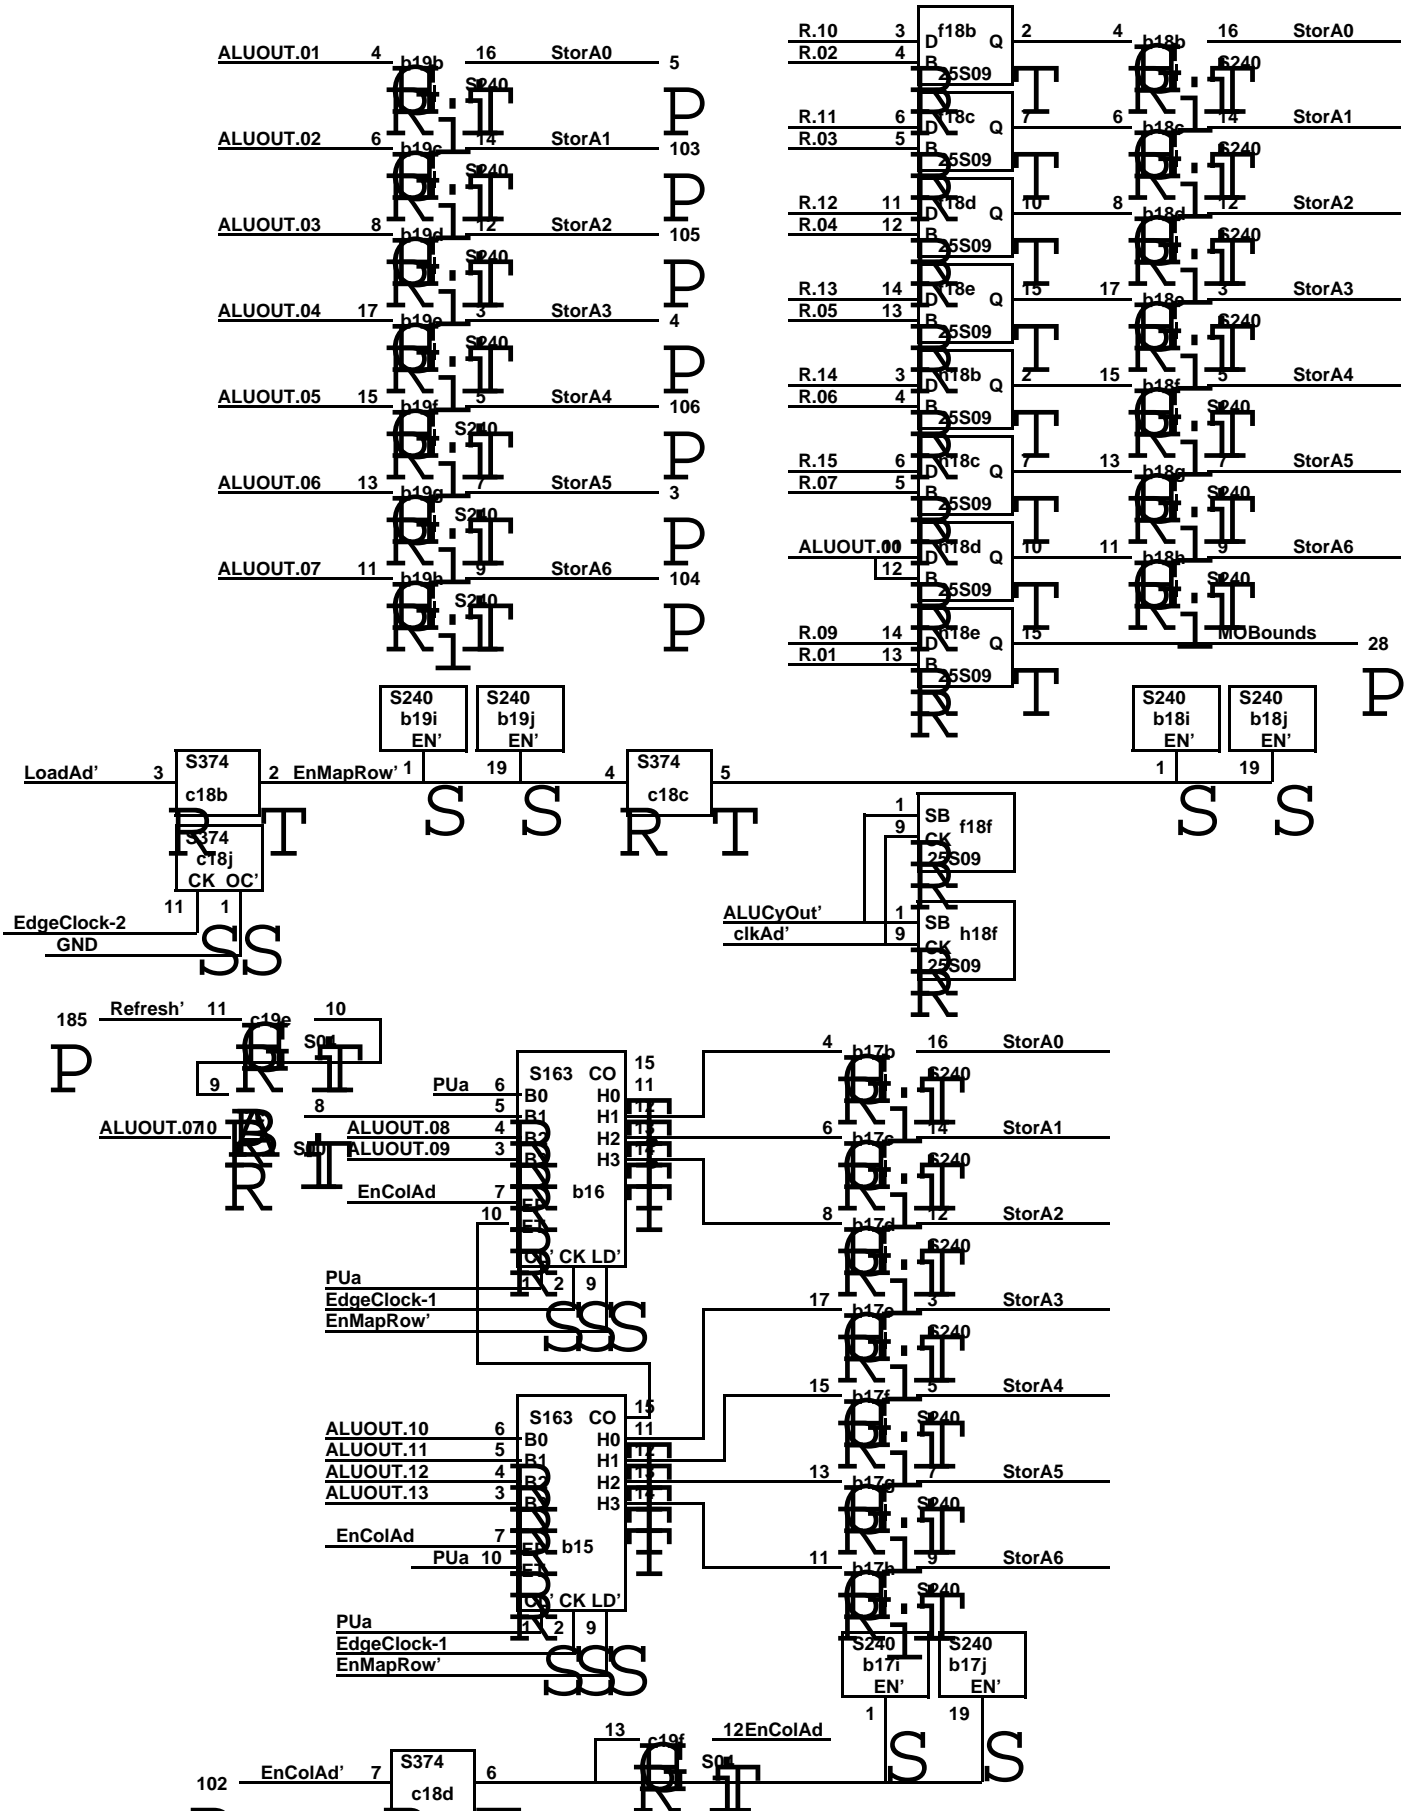

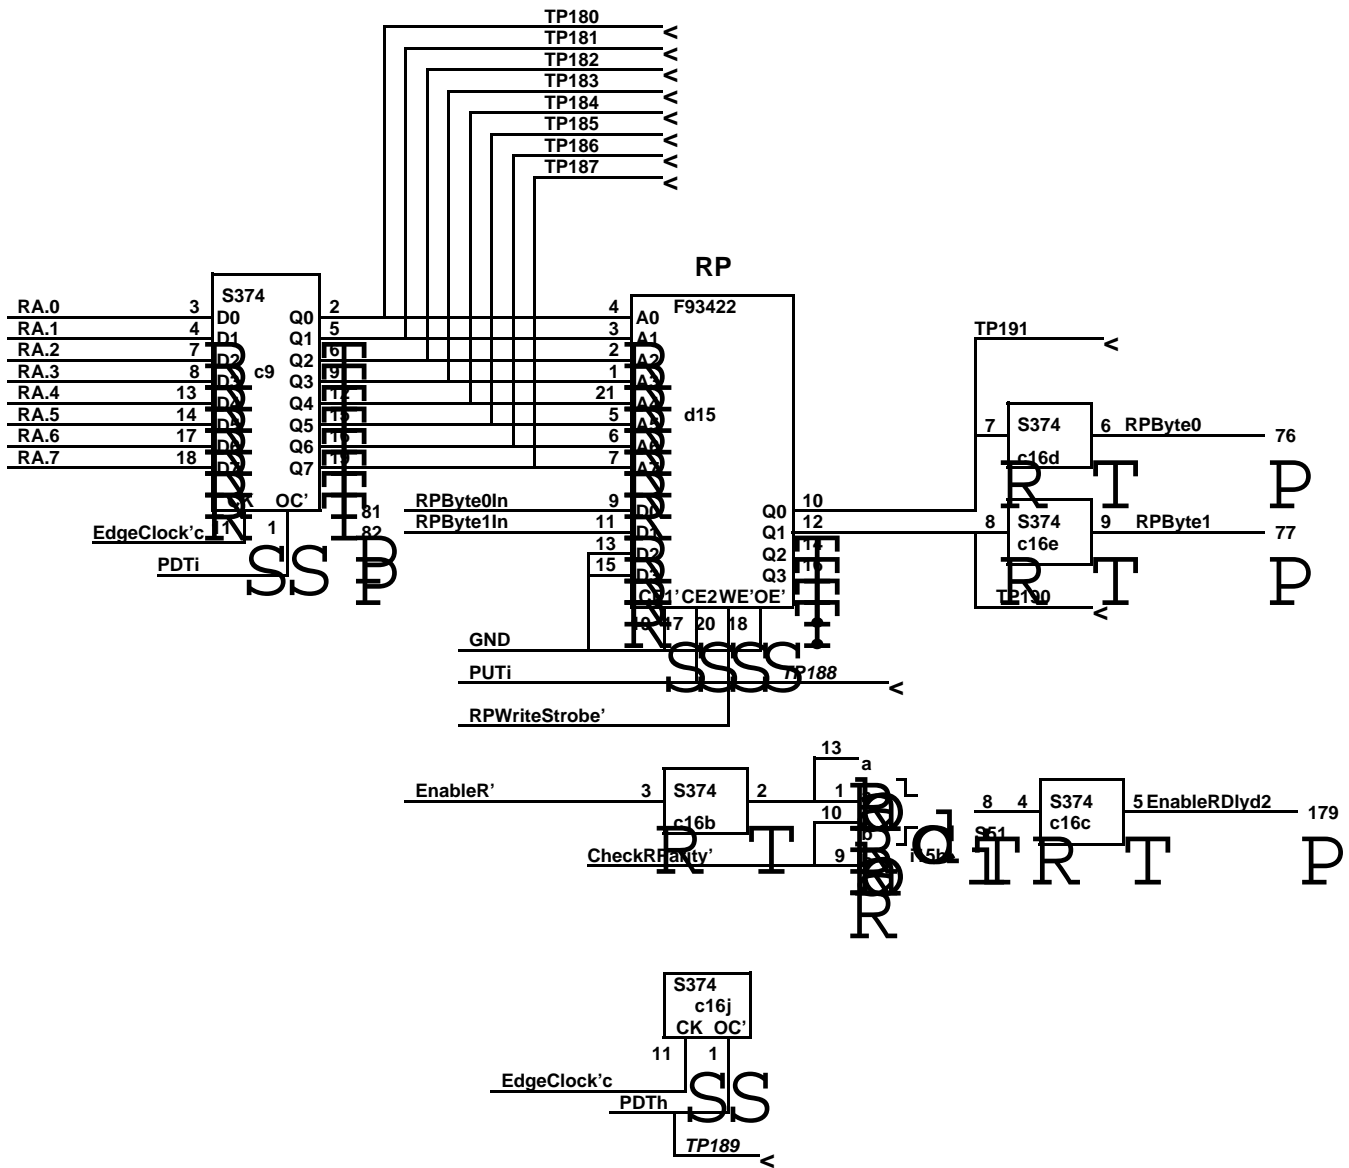

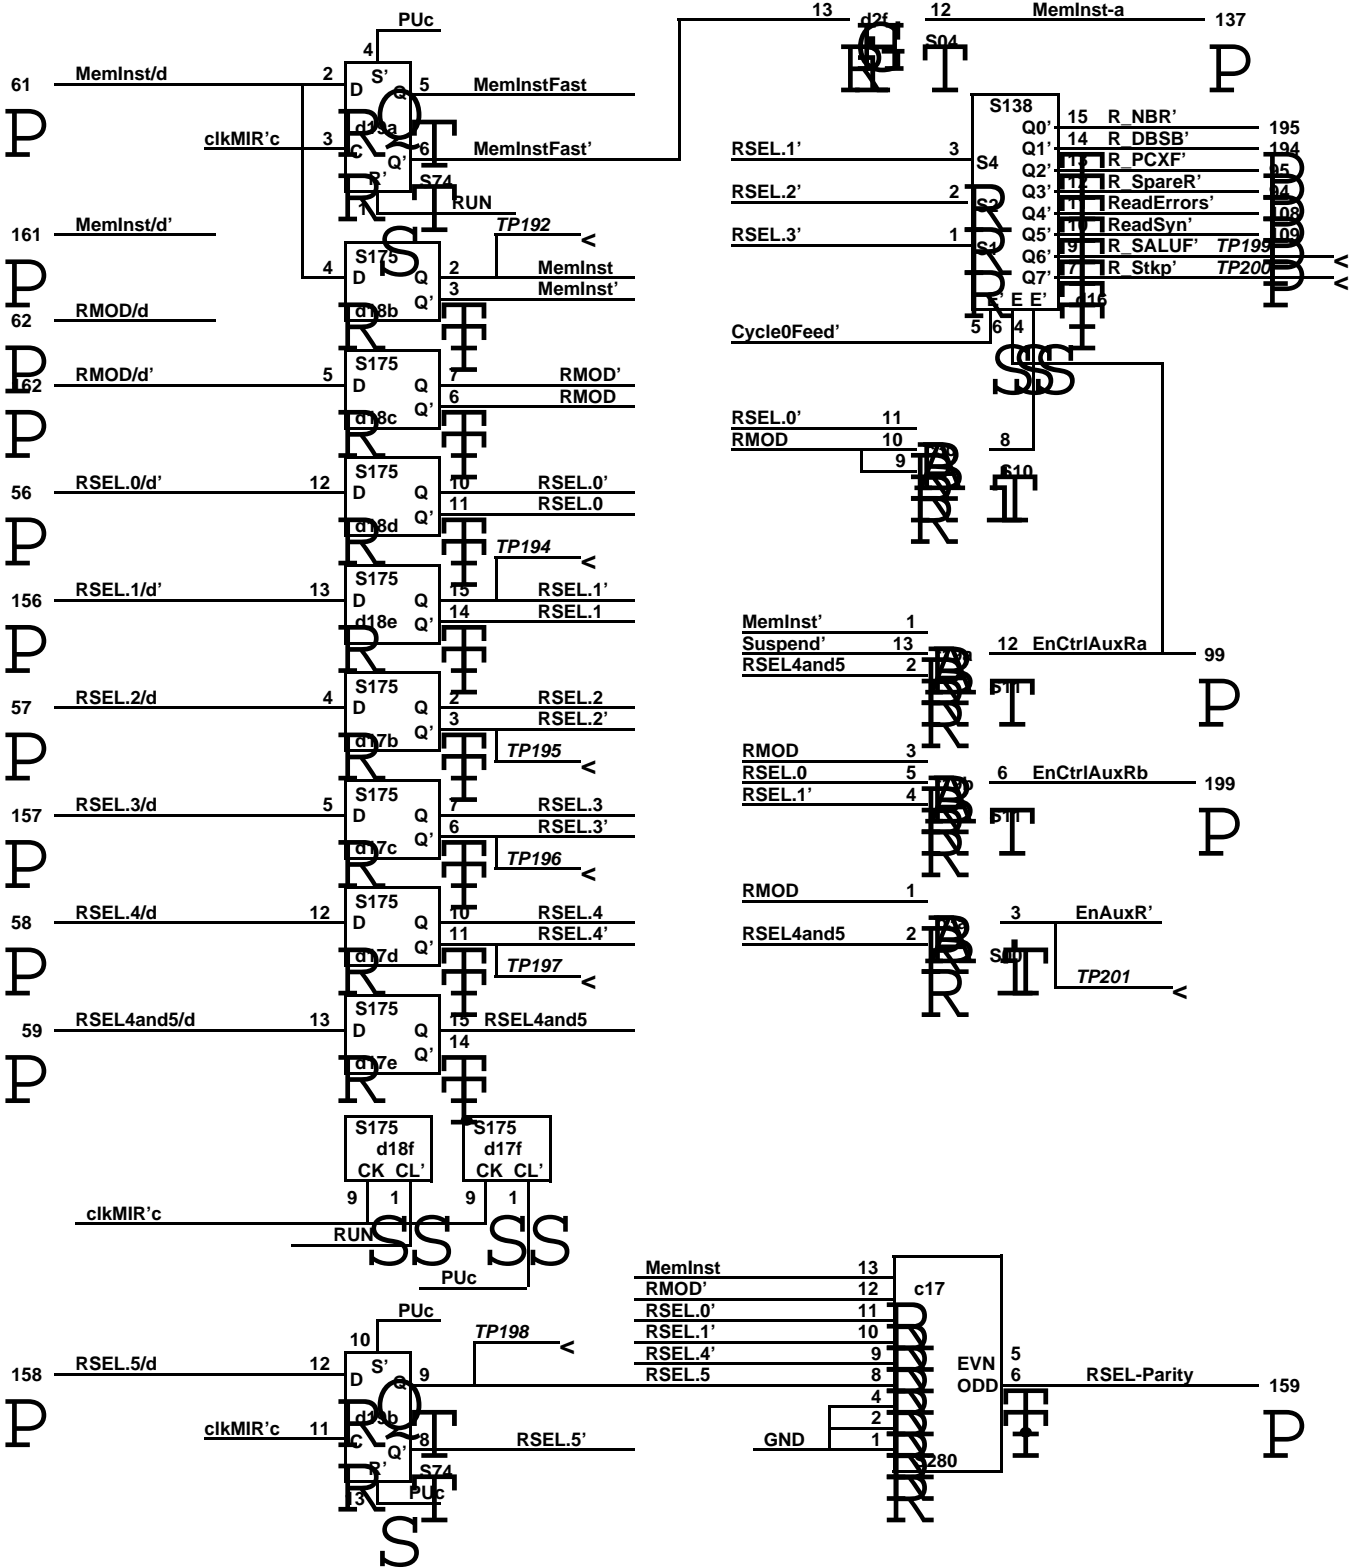

Changes for revision G to H:

- 1) Added clkH2' (pg 6,15).
- 2) Added output CheckRParity' to prom d5 (pg 9) and S51 i15b (pg 18) to check parity only when R is read.
- 3) Added (pg 6) gates i2b, a3a, and b4c to correct deficiencies in R address calculation.
- 4) Added signal PUTj (pg 14, 20) for test.
- 5) Added signal PUTk and gate b3c (pg 15,20) for test.
- 6) Added signal PDTi (pg 18,20) for test.

Changes for revision H to I:

- 1) Changed signal named HighByte_F1F2 to HighByte_F1F2' and changed dwg. of gate c3a (pg5).
- 2) Removed sign extension feature for constants in arithmetic operations. Changed signals SignExtendF1F2 to GND (pg 3,4) and removed gate a4a (pg 5).
- 3) Changed clear input of d18 from Puc to RUN (pg 19).
- 4) Eliminated (redundant) signal LoadMC1 (p16). This signal is now LoadAd. Changed gate at c3b (S10) to S00 (e2b).
- 5) f2.15 is now GND, was MemInst' (pg 16).
- 7) Changed ALUA.08In-ALUA.15IN to ALUA.08-ALUA.15 (stkp input, pg 11).
- 8) Added S240's to force R[04:07] to ONE during R_SALUF (pg 10).
- 9) Added test points. If signal was named, t.p is added in italics. If not, signal name is now TPxxx.

Changes for revision I to J (6/26/78)

- 1) Replaced signal Cycle0' with Cycle0Feed' at a4.10 (pg 6)
- 2) Changed PUB to MC2XferWord at c15.3 (pg 13)
- 3) Changed PUB to MC2XferWord at d11.6 (pg 13)
- 4) Generated MC1XWdly at g2.15 - added feedback from g2.12 to g2.2, removed Puc from g2.2 (pg 16)
- 5) Renamed MC1WillGetR' to ShiftMC1XW' (pg 16)
- 6) Generated MemNeedsR' in S51 at a3b rather than in S02 at b4a (pg 16)
- 7) Generated MC2XWdly in S74 at i1b (pg 16)
- 8) a8.10 is now connected to MC1XWdly (was MC1HasR) (pg 20)

Changes for revision J to K (8/29/78)

- 1) Shuffled inputs to decoder d16 and gate c3c, connected d16.5 to Cycle0Feed' (pg 19).
- 2) Changed gate c8a to S10 at c3b to form clkSStkp' (pg 15).
- 3) Changed a4.2,5,10,13 from MC2Ad.x to MC2CAd.x to make Raddress interlocking during single errors work properly (pg20).

Changes for revision K to revision L (10/7/78)

- 1) Changed inputs of c14 section b (pg13) from GND to ProcCycle0 and SRSA2. This requires revision E for Prom b2.
- 2) Connected clear inputs of g2 and h2 (pg16) to RUN rather than Puc. (required to initialize XferWord regs. at boot).
- 3) Reversed order of test points TP206-TP209 (pg 20).

Changes for revision L to revision M (12/9/78).

- 1) Changed h19.1 from QWO to H2.08' (pg 10). Branch on QWO is now done on Control Store.
- 2) Added flip-flop c18d in line EnColAd' (pg 17). Memory Control rev M is required with this change.
- 3) Added PROM a2 (at revision F) to check Stack overflow (pg 11).
- 4) Removed signal MC1XferWord from E006 to make room for new signal StackEmpty (pg 16).

Note: Revision M = Revision Ga

Current Prom Revisions:

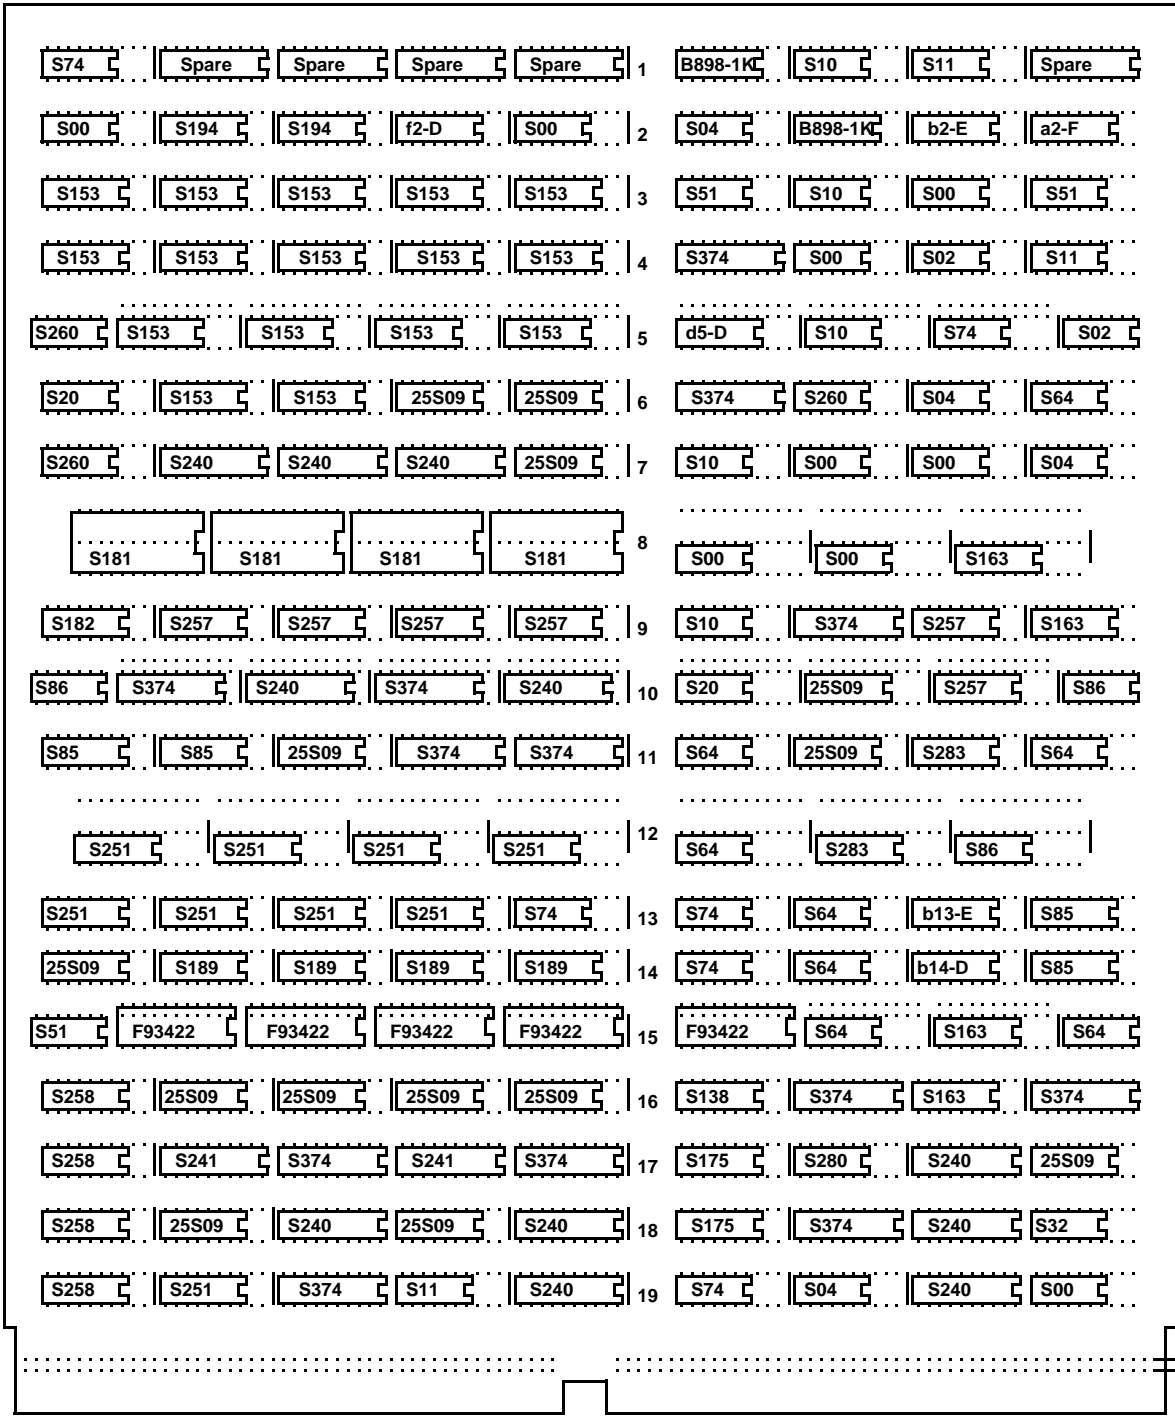

- a2: F
- d5: D
- b14: D
- b13: E
- f2: D
- b2: E

Note: This board contains no platforms. The "Plats" at positions c2 and d1 are Beckman B898-1-R1K resitor networks (15 1K resistors with pin 16 common).

Equivalent networks from other manufacturers may be substituted.
